

Magnification mirror

The zoom scope is designed for the non-magnification scope to provide rapid switching of close and long distance combat magnification; it can be aimed at a distance of 100m~800m; it improves the search and precision strike capability of the non-magnification scope in long distance combat.

Thanks to its rapid flipping and precise positioning, the zoom scope offers a simple and fast aiming method. It is especially suitable for military units in reconnaissance, counter-terrorism, riot control, and peacekeeping missions. In complex environments, harsh weather, and close combat situations, it excels in long-range operations, significantly enhancing individual combat capabilities.

The scope is suitable for firearms with Picatinny and quasi-Picatinny interfaces, which can be adapted or bridged to other firearms.

technical parameter:

Magnification	3x	Aperture diameter	≥6.0mm
Aperture distance	68.0mm	View range	-3D ~ +2D
Adjustable range	≥ ± 40MOA	Effective caliber	Φ 18mm
Central height	36mm	Zero accuracy	less than or equal to 5MOA

The weight is not greater than 360g
