

Red dot sight

					
Closed red dot scope			Open red dot sight		

1. Product Introduction:

The red dot sight is compact, lightweight, and offers high aiming accuracy, making it easy for users to operate. It is a new type of optical sight specifically designed for close combat, featuring a light weight, no magnification, and the ability to be quickly aimed at with both eyes. Due to its large field of view, low parallax, and ease of sighting, the red dot sight provides a simple and fast aiming method, making it particularly suitable for use in complex environments and harsh weather conditions. It performs exceptionally well in close combat, effectively enhancing individual combat capabilities.

2. main technical parameters

classify	Parameter name	parameter values
functional parameter	window	16 × 22 (mm)
	optical parallax	≤2 MOA
	Zero position accuracy	≤2 MOA
	adjustable range	≥ ± 50 MOA
	Adjust the accuracy	1 MOA
	Dimension of the partition	Point 2MOA circle 32MOA
	Divide and choose	Switch between dots and circles
Electrical parameters	cell	CR2032
	Duration of continuous work	> 10000H
	brightness control	12-bit brightness
Other performance parameters	outline dimension	53 × 39 × 38 (mm)
	weight	< 90g
	working temperature	-30℃ ~ 55℃
	storage temperature	-40℃ ~ 70℃
	Dust and water resistance rating	IP67
	Install the interface	Pacatinib rail
